PRMS continues to deliver substantial value for companies around the world yet there appears to be a growing concern for its future viability. Some modules are no longer supported. New releases are no longer planned. Even the vendor is trying to swap your licenses for newer products. This webinar discusses the real status of PRMS and why it continues to be your low-risk, high-value ERP solution for years to come.

Some of the topics we will discuss include:

- Software vendors treatment of legacy products like PRMS
- Where does PRMS fit in a continuum of viability?
- How does PRMS fit alongside all of the newest technologies?
- What are your options for your PRMS implementation going forward?
- How do you get more value from PRMS?
- How does PSGi extend the lives of legacy applications like PRMS?

Precision Solutions Group along with partner Interactive Process Solutions (a.k.a. IPC Consulting) are complete solution providers for legacy software products including PRMS. We have a history of providing:

- Customer support for highly modified implementations
- Professional services including business process optimization and training
- Enhancements including modernization
- Add-on products
- and more

PRMS continues to deliver the desired functionality for hundreds of companies and provides significant return on your continuing investment. Now PSGi satisfies all the requirements for your mission-critical PRMS implementation. With your assistance PSGi intends to breathe new life in PRMS and the PRMS User Community.
